11:03:35   From Jeff Grabb : Go get'em Jim
11:20:46   From George Wiman : Have to step away, will find video
11:21:03   From Melinda Potter : Can't show the wizard of Oz quite yet :)
11:22:43   From Liam Nance-Carroll : This looks very interesting and could change the way we handle faculty laptops for the better
11:36:29   From Melinda Potter : From experience, interacting with these computers that have been through autopilot/intune has been a very nice process
11:44:23   From Carla Birckelbaw : yep, approx. 15 min with the student to set it up and very few reported issues after
11:51:15   From Liam Nance-Carroll : Carla that is incredibly impressive
11:51:21   From David Greenfield : As we go through spring client mass purchase, we will need to consider this. On the quoting side (Dell & Lenovo), we need a specific Windows Autopilot line attached to ISU as part of each quote build.
11:53:27   From Jeff Grabb : Thanks, Dave...I was gonna ask about how that works out.
11:55:34   From Nathan Carpenter : What's the per device cost for Autopilot?
11:55:34   From Ryan Dwyer : Looking forward to trying Anyconnect SBL
11:56:51   From Paul Unsbee : Is that one time cost or yearly sub per device?
11:57:43   From Ryan Dwyer : I like that idea Dave
12:01:16   From Liam Nance-Carroll : Internet access is another equity issue but that is for another discussion at another time
12:02:22   From Jeff Grabb : This sure seems like we need to create a new endpoint and endpoint mgmt. governance structure ;)
12:02:34   From Jeff Grabb : This with Jamf and SCCM, etc.
12:03:40   From Nathan Carpenter : Agreed, Jeff - and support for transition
12:04:11   From Liam Nance-Carroll : lots of support
